Software Requirement Specification Quality Analysis Report

Generated By: SRSentinel AI

Technology: NLP + Machine Learning + Explainable AI

Prediction Summary

Prediction	High Quality
Confidence	95.0%
Confidence Level	Very High
Quality Score	90/100
Grade	A+
Status	Excellent

Requirement Statistics

Metric	Count
Total Requirements	22
Functional Requirements	14
Non Functional Requirements	0
Other Requirements	8

Ambiguity Analysis

Metric	Value
Ambiguous Words	0
Severity	None
Ambiguity Score	100

Explainable AI Analysis

Positive Indicators

• Machine Learning model predicts High Quality.

• Very few ambiguous words detected.

• Functional requirements are properly defined.

Negative Indicators

• Non-Functional requirements are insufficient.

AI Explanation

The uploaded Software Requirement Specification document was analyzed using Natural Language Processing and a Machine Learning model. Prediction : High Quality Quality Score : 90/100 Functional Requirements : 14 Non Functional Requirements : 0 Ambiguous Words : 0 The prediction is mainly influenced by requirement coverage, requirement clarity, and the number of ambiguous words detected in the document.

Improvement Suggestions

• Functional Requirement coverage is satisfactory.

• Include Non-Functional Requirements such as performance, security and reliability.

Best Practices

• Use clear and concise language.

• Avoid vague and subjective words.

• Write measurable and testable requirements.

• Separate Functional and Non-Functional Requirements.

• Ensure every requirement is complete and consistent.

• Specify performance, security and reliability constraints.

• Review the SRS document regularly.

Quality Improvement Checklist

• ✔ Requirements are clear and well-defined.

• ✔ Maintain the current documentation quality.
